

The cost of an alarm

Year 7 student investigation

Which alarm mistakes matter in this situation?

Hypothesis and criterion

Name the expected effect, the measurement and what would count against your explanation.

Method and reproducibility

Record cases, source, units, parameters, controls and how cases are split.

Paired evidence

Case and split	Baseline	Changed result	Interpretation

Counterexample and revised design

Write a fictional scenario, assign costs before testing, and defend the threshold with per-case evidence.

Individual defence

Explain one exact result, the mechanism, your limitation and what would overturn your claim.

Handover and tool use

Next test, saved project filename, tools used and which work is your own.

Use fictional data. Download your project before changing devices. On shared devices, turn remembering off and clear your work when finished.
